

AMENDMENTS TO THE SPECIFICATION

Please add the following paragraph just after the title and just before line 5:

CROSS REFERENCE TO RELATED APPLICATION

This application claims the benefit of U.S. provisional application serial No. 60/483,213 filed June 27, 2003, which the entire subject matter is incorporated herein by reference.

Page 6, line 5:

The carrier assembly includes a portion 58, which extends downwardly from a top edge thereof, to engage the cutout portion 54. When the spring/carrier combination 26 is fitted into cup member 18, portion 58 of the carrier assembly fits snugly into cutout portion 54 on the cup member. The configuration of the cutout portion 54 and portion 58 can of course be varied significantly as well as their position around the peripheries of cup member 18 and carrier assembly, respectively. The fit, however, between portion 58 of the carrier assembly and cutout portion 54 on the cup member ~~47~~ 18 serves to prevent rotation of the spring/carrier combination and also, because of the snugness of their fit, provides some protection against translational (in/out) movement of the spring/carrier combination relative to the handle, while at the same time permitting the spring/carrier combination and the brush member structure associate thereon to be conveniently removed from cup 18 when it is time to replace the brush.
